Subject: Pavillion data for SCRIBE

As everyone on this list has a little bit of knowledge about what's been done and where we are relative to getting all phases of the Pavillion data into SCRIBE with accurate data qualifiers, I was hoping I could get us all on the phone briefly to try and sort through, in Greg's absence, what needs to happen to get this moving asap. Hopefully this time works.

KEY QUESTIONS

Are the Ph 3 and 4 data loaded? If so, what source was used?

Have the data qualifers for these phases been checked to ensure accuracy and consistency with NFGs?

What's the most efficient way for ESAT to access the Ph5 data w/ accurate qualifers to begin loading?
